AND
BLOOD

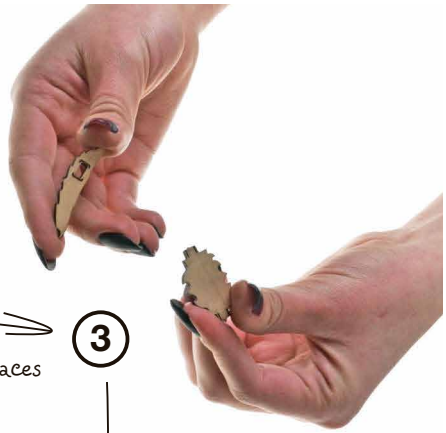

1

2

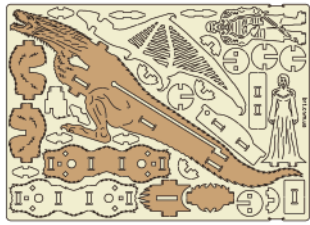

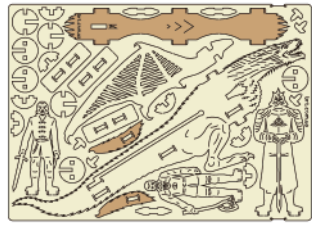

3

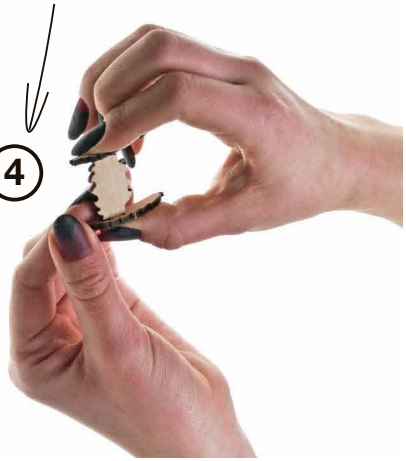

We fasten the sides to the bottom partition, look carefully at the places mounts and sides of parts to install them properly

the places of attachment need to cut with a knife, preferably on both sides

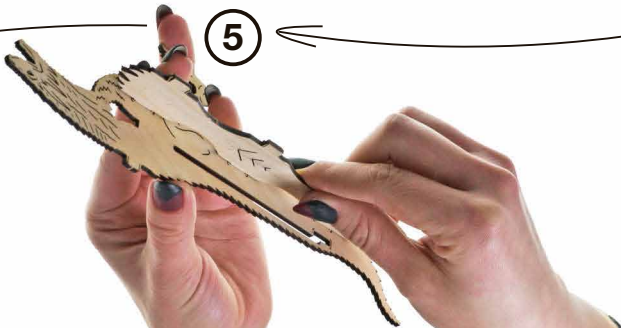

Locks at connection points come in very tight, so here you don't need to hurry. For easy attachment, locks can be sanded

4

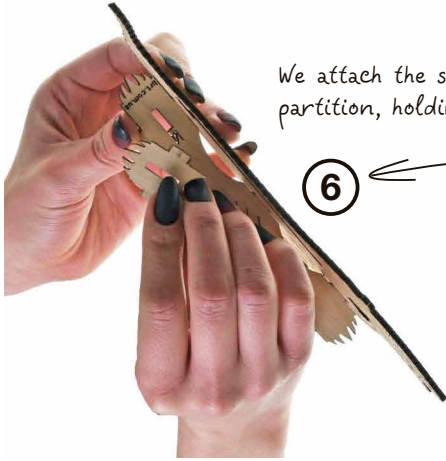

Attach lateral elements to the tail decor

5

We attach the side of the case to the partition, holding the connection points

6

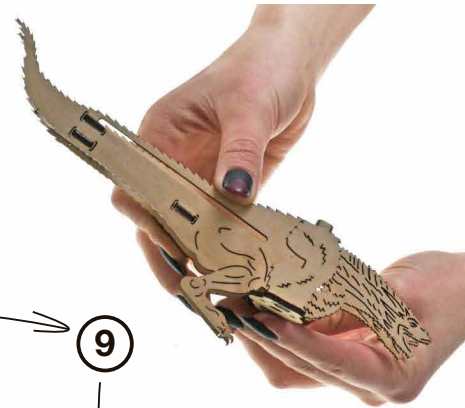

7

Fasten the trigger holder and the other side of the case to the partition

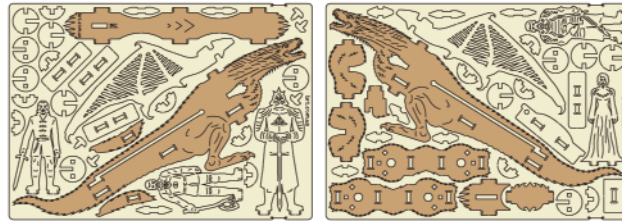

8

We attach the case to partitions with racks

9

Moderately press to connecting locks

Insert tail hook in holder from above

10

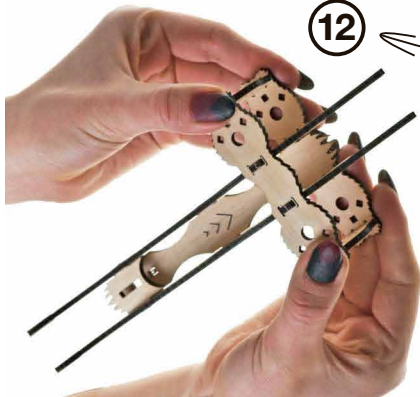

11

12

the upper partition is attached to the Ballista Body

13

14

15

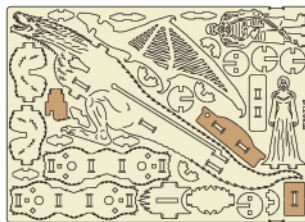

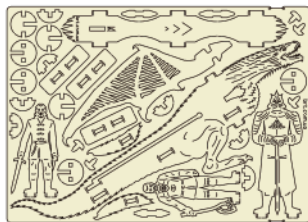

We lock the hook with the stopper from below

Cut off two 60cm pieces twine

19

Target figures are fasten on the supports

18

We make two of twine rings

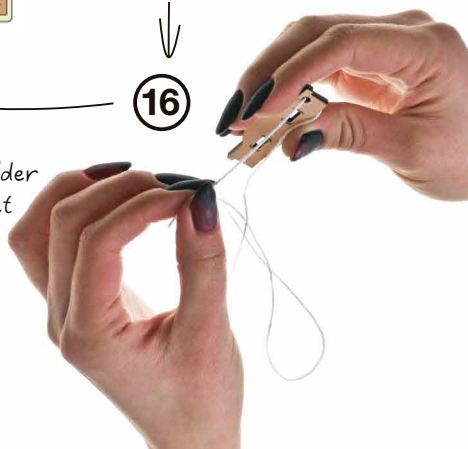

The ends of twine fry by the lighter

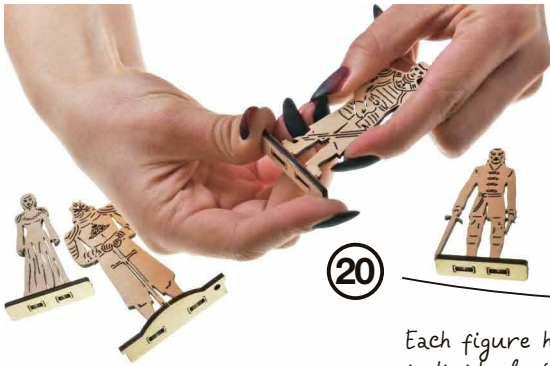

17

Wrap the twine 4 times around the holder and we make ends meet

16

We promote twine through hole so that it started coming out at to you

20

Each figure has its own individual stand

21

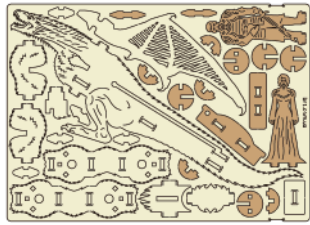

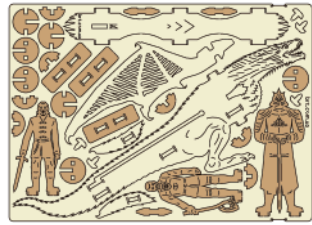

22

Each Bullet is blended with four pieces, all in a set there are 6 Bullets

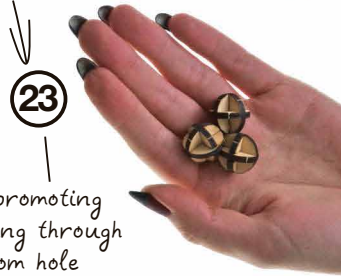

27

We repeat the same actions with another twine ring

Now push the ring through the top hole blocking with another tensioning stopper

23

We are promoting twine ring through the bottom hole and block tensioning stopper

26

And for relief these actions are possible to use a paper clip

25

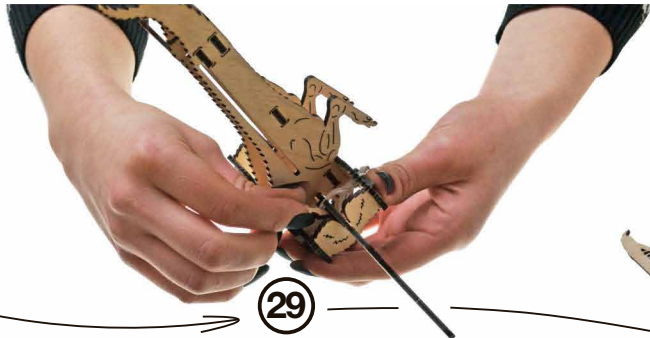

24

28

We insert the Ballista's shoulder, splitting the twine evenly, and then we promote sealant

We tie the twine to shoulders pushing him through the grooves in the housing

29

The seals must be mounted on top and from below and close to the shoulder Ballista

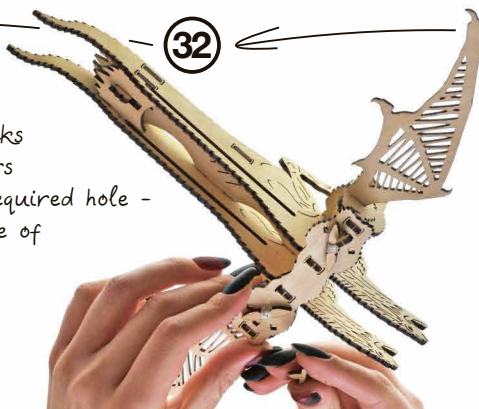

30

Wrap the top and lower stoppers in the right direction, controlling force of tension

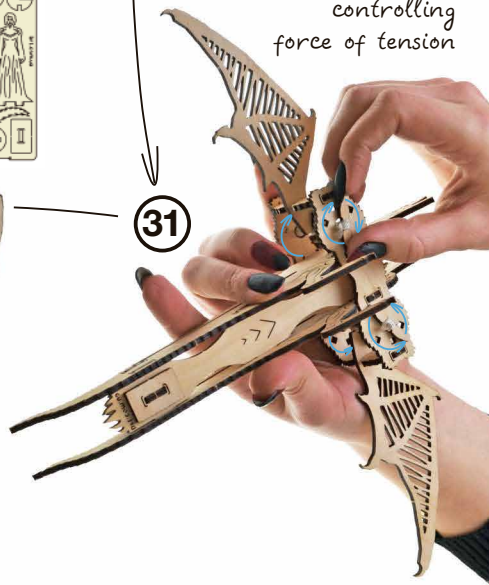

33

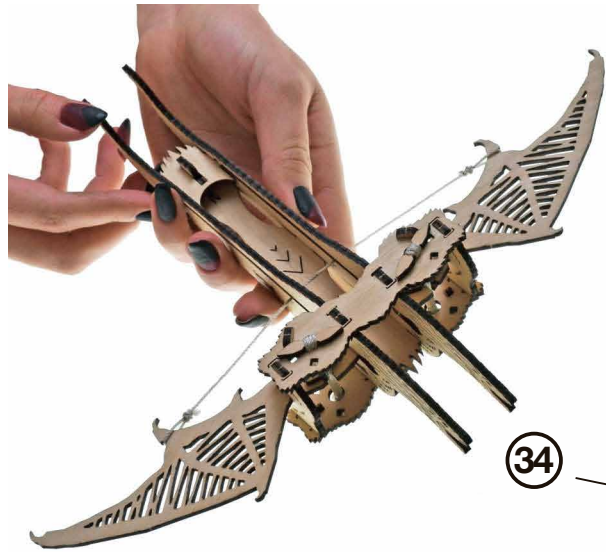

Insert blocks for stoppers into the required hole - the opposite of parties promotion

32

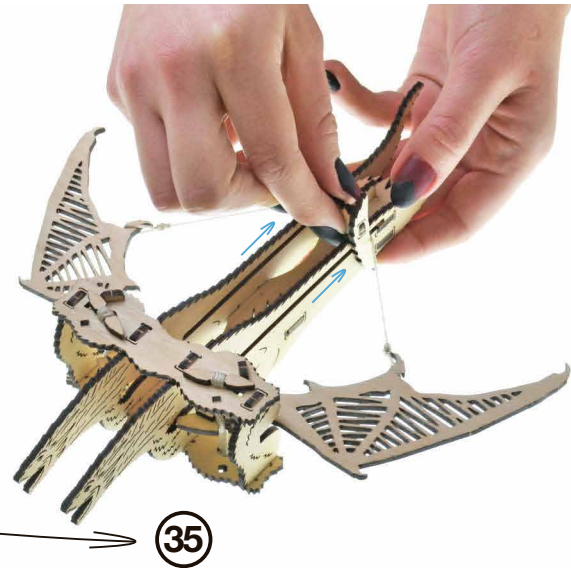

31

After charging
this part used
as an element of decor,
and put on its tail

34

Charge the ballista by
special detail

35

And then it's simple
aim at the target
and click on the hook)

BALLISTA TARGARYEN

Mechanical 3D-puzzle based on the world-famous saga "Song of Ice and Flame" and the series "The Game of the Thrones".

This is a true military technique in miniature. Designed in fantasy style. It shoots with bullets and works at the expense of tension forces when unlocking blocks. Puzzle made of the natural wood.

Releases 1 to 3 bullets at a time! Shooting at a distance of up to 10 meters, with its compact size.

Bullets are included. If you desired, they can be replaced by any other "ammunition" of appropriate size - for example, paper balls.

Suitable for children aged up to 10 years. Can be collected for 40-60 minutes.

Before assembling, remove the parts from the workpiece using a conventional clerical knife. Each element is already cut out on the laser equipment circuit - just pull it out and draw up the pattern.

A wooden Ballista is created for anyone who interested in historical weapons. It allows you to understand the basic principles of physics and ballistics. The assembly process itself is no less interesting as a shooting of the fantasy Ballista. A nice gift for both children and adults.

Also included are the target figurines, which will immediately recognize by the true fans of the saga)

The set also has a thematic panorama, which will help plunge into the atmosphere of battle)

Everything is like a real battlefield. So, rather, charge and shoot!

The peculiarity of the material is such that it can easily be painted even with colored pencils.

Make your Ballista and characters original and individual)

Difficulty: easy

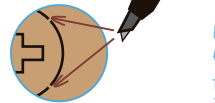

Collection time: 40-60 min

Number of components: 61 pcs. (6 of them are spare)

The size of the workpiece with parts: 210 * 150 * 3 mm (2pcs)

The size of the finished ballista: 190 * 185 * 70 mm

the stationery knife
